

## Insight 1

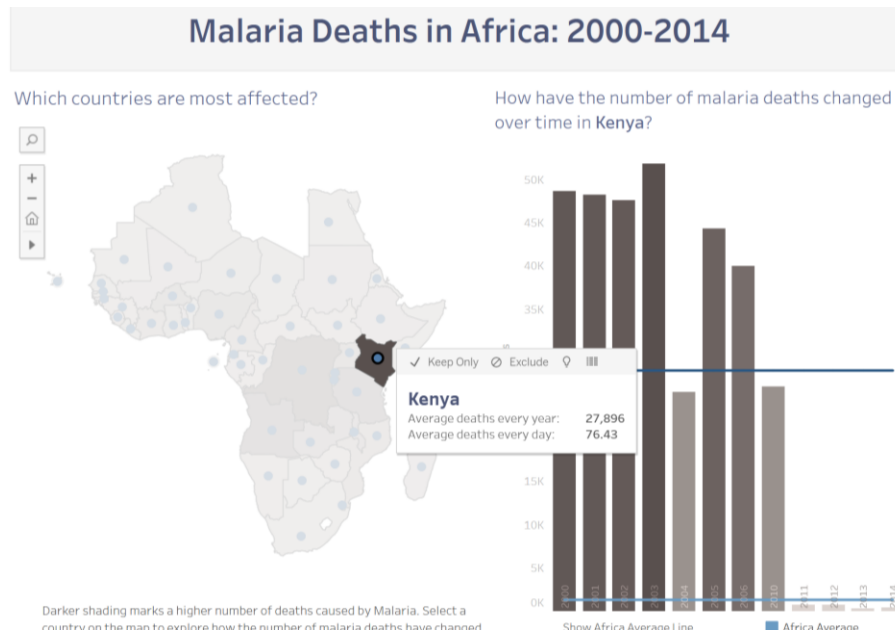

When I clicked on Sudan on the map to see how many Malaria Deaths were in Sudan: 2000-2014, the deaths count from Malaria in Sudan 2000-2005 were above country and Africa average which were 1303 per year Africa's average and 1406 per year country's average that equals to 3.85 daily, in contrast 2006-2014 deaths due to Malaria were reduced below the average.

## Insight 2

When I clicked on Nigeria on the map appeared to me average deaths every year: 6331 and average per day: 17.35 and from the graph we can see deaths number had gradually increased made the heist number of deaths in 2007 then decreased but in 2012 start got high again.

### Insight 3

The darkest shading country on the map is Kenya it means Kenya is the highest number of Malaria Deaths in Africa: 2000-2014 and when I clicked on it in the map, I saw average deaths every year is 27896 and average deaths every day is 76.43. 2000-2010 deaths were higher than the Africa average which was 1303 before that we just have two years below country average: 2004 and 2010.
